

CHAPTER 1 Notes Sheet

Lesson 1.01 Rounding, Estimating, & Range

A. Place Values

B. Rounding

5 Easy Steps of Rounding

1. **UNDERLINE** the column to be rounded to
2. **CIRCLE** the number to the right of the underlined number
3. If the circled number is 0 or 1, the underlined number stays the same
or
If the number in the circle is 5, 6, 7, 8, or 9, ADD 1 to the underlined number
4. All the numbers to the right of the underlined number become ZEROS
5. All the numbers to the left of the underlined number stay the same, but must be put in your answer

Lesson 1.02 Number Operations

A. Order of operations

1. Operations in Parenthesis
2. Exponents
3. Multiplication/ Division from left to right
4. Addition/ Subtraction from left to right

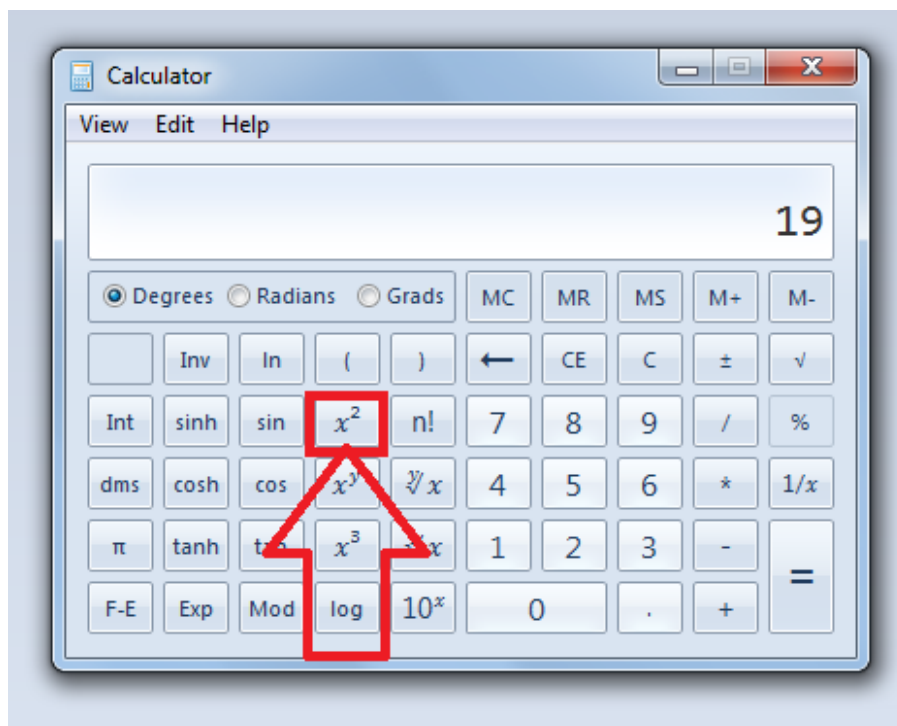

B. Different Forms

- a. Exponential Form 7^2
- b. Expanded Form 7×7
- c. Standard Form 4,956
- d. Expanded Form $4(1000) + 9(100) + 5(10) + 6(1)$

Lesson 1.03 Number Sense: Square and Square Roots

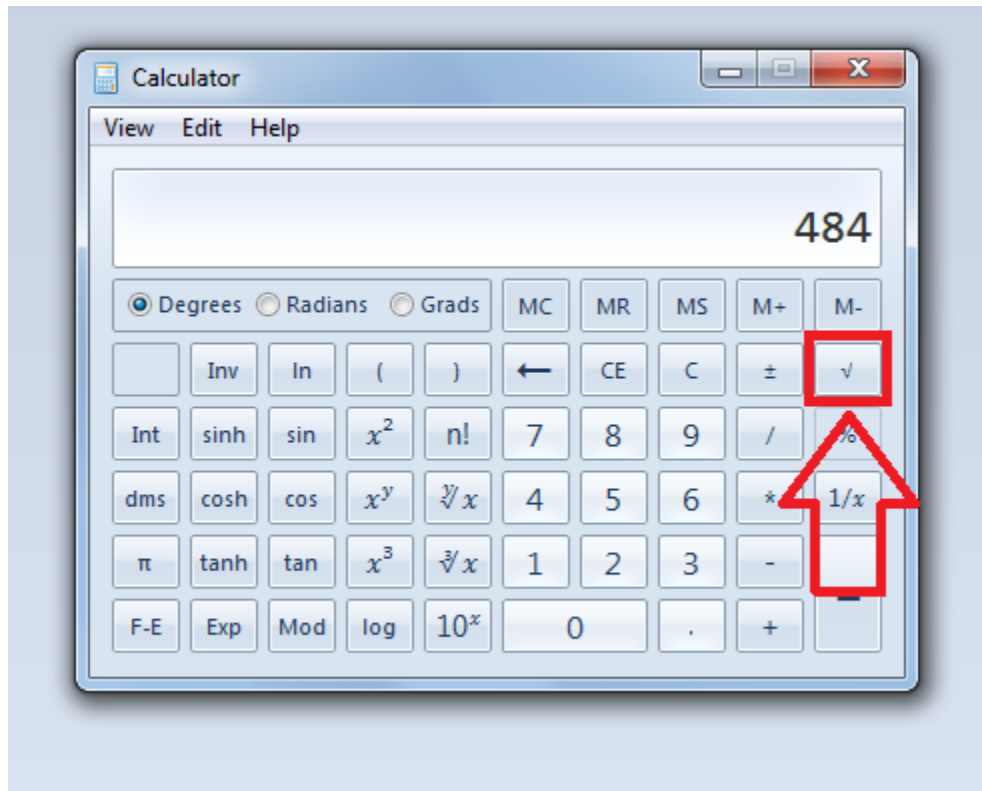

A. Squares

$$19^2 = 361$$

B. Square Roots

$$\sqrt{484} = 22$$

Lesson 1.04 & 1.05 Word Problems

A. 5 Step - Plan

- a. Understand the problem
- b. Analyze the problem
- c. Plan how to solve the problem
- d. Solve the problem
- e. Check the answer

B. Using Data in Word Problems

Mean

© 2012 Classroom Compulsion | All Rights Reserved.

**the average of a
set of numbers**

**the sum of the data
of data items**

© 2012 Classroom Compulsion | All Rights Reserved.

Median

© 2012 Classroom Compulsion | All Rights Reserved.

**the middle number
in a set of data**

Data must be in order first.

© 2012 Classroom Compulsion | All Rights Reserved.

Mode

© 2012 Classroom Compulsion | All Rights Reserved.

**the number which
appears most
often in a set of
numbers**

© 2012 Classroom Compulsion | All Rights Reserved.

Range

© 2012 Classroom Compulsion | All Rights Reserved.

**the difference
between the
lowest and highest
numbers in a data
set**

Lesson 1.06 - Multiplication Properties

A. Distributive Property

a. $2 \times (20 + 5) = (2 \times 20) + (2 \times 5)$

B. Commutative Property

a. $7 \times 2 = 2 \times 7$

C. Associative Property

a. $2 \times (4 \times 3) = (2 \times 4) \times 3$

D. Property of One

a. $9 \times 1 = 9$

E. Zero Property

a. $25 \times 0 = 0$

Lesson 1.07 - Multiplication: Decimals

Multiply the numbers. Don't worry about the decimal points just yet.

$$\begin{array}{r} 1.124 \\ \times 1.5 \\ \hline 5620 \\ 1124 \\ \hline 16860 \end{array}$$

Count the total number of decimal places (or hops). In this case there are 3 on the top and one on the bottom.

$$\begin{array}{r} 1.124 \\ \times 1.5 \\ \hline 5620 \\ 1124 \\ \hline 16860 \end{array}$$

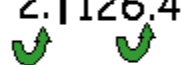

Place the decimal point in the answer. Use the same number of hops (decimal places) that you counted.

$$\begin{array}{r} 1.124 \\ \times 1.5 \\ \hline 5620 \\ 1124 \\ \hline 1.6860 \end{array}$$

Lesson 1.08 Division Decimals

Make the divisor a whole number by moving the decimal point to the right. Move the decimal point in the dividend by the same number of hops. This is the same as multiplying both numbers by 10 (for each hop.)

$$.2 \overline{)12.64}$$

$$2 \overline{)126.4}$$

Place the decimal point in the answer lined up with decimal point in the dividend.

$$2 \overline{)126.4}$$

Divide the numbers. Be sure that the decimal points remain lined up.

$$\begin{array}{r} 63.2 \\ 2 \overline{)126.4} \end{array}$$

Lesson 1.09 Number Sense: Factors

A. Rules of Divisibility

- All even numbers are divisible by 2
- If the sum of the digits is a multiple of 3, the number is divisible by 3
- If the last two digits are divisible by 4, the whole number is divisible by 4
- If there is a 0 or 5 in the ones place of any number, the number is divisible by 5
- If there is a 0 or 5 in the ones place of any number, the number is divisible by 5
- If the sum of the digits of a number is 9, the number is divisible by 9

B. Prime Numbers

- If a number has only two factors, 1 and itself, it is called prime

Lesson 10 - Equivalent Fractions

A. Changing a fraction to a decimal

Example: 1 Change $\frac{1}{4}$ to a decimal
1 divid by 4 = 0.25

Example: 2 Change $\frac{4}{8}$ to a decimal
4 divid by 8 = 0.5

B. Comparing Fractions

Compare $\frac{3}{4}$ & $\frac{2}{3}$

The LCM of 3 and 4 is 12

$$\frac{3 \times 3}{4 \times 3} = \frac{9}{12} \quad \frac{2 \times 4}{3 \times 4} = \frac{8}{12}$$

$$\frac{9}{12} > \frac{8}{12}$$

C. Reciprocal Fractions

RECIPROCAL

$$\frac{3}{4} \quad \longleftrightarrow \quad \frac{4}{3}$$

Lesson 1.11 Estimating with Fractions

A. Rounding fractions

$\frac{5}{6}$ is closer to 1 than to 0.

Therefore $\frac{5}{6}$ will round to 1.

B. Adding fractions

$$\begin{aligned}\frac{3}{4} + \frac{1}{3} &= \frac{3 \times 3}{4 \times 3} + \frac{1 \times 4}{3 \times 4} \\ &= \frac{9}{12} + \frac{4}{12} \\ &= \frac{13}{12} = 1\frac{1}{12}\end{aligned}$$

C. Subtracting fractions

$$\begin{aligned}\frac{5}{6} - \frac{2}{15} &= \frac{5 \times 5}{6 \times 5} - \frac{2 \times 2}{15 \times 2} \\ &= \frac{25}{30} - \frac{4}{30} \\ &= \frac{21}{30} \\ &= \frac{7}{10}\end{aligned}$$

Lesson 1.12 Multiplying and Dividing Fractions

A. Multiplying Fractions

Multiply the numerators

$$\frac{2}{5} \times \frac{3}{4} = \frac{6}{20}$$

Multiply the denominators

$$\frac{2}{5} \times \frac{3}{4} = \frac{6}{20}$$

Reduce the fraction if necessary

$$\frac{6}{20} = \frac{3}{10}$$

B. Dividing Fractions

Invert the fraction that you are dividing by

$$\frac{4}{5} \div \frac{2}{3} = \frac{4}{5} \times \frac{3}{2}$$

Multiply the numerators and denominators

$$\frac{4}{5} \times \frac{3}{2} = \frac{12}{10}$$

Simplify the fraction if necessary

$$\frac{12}{10} = 1\frac{1}{5}$$
